

An Integrated Drug and Alcohol Monitoring Solution for Drug Treatment and Recovery Services

DrugPatch® and SCRAM Remote Breath®

A Simpler, Smarter and Superior Solution for Drug and Alcohol Abstinence Monitoring

Effective recovery depends on accurate, timely information that supports clinical decision-making and identifies relapse early. Traditional methods - urine screens, oral fluid tests, occasional breath tests - capture only a snapshot in time and can miss relapse between tests, while sample substitution and missed appointments further limit reliability.

The combined DrugPatch® and SCRAM Remote Breath® solution closes these gaps: continuous drug abstinence monitoring alongside remote alcohol testing gives providers a complete, objective picture of compliance - usable together or independently across community, residential, criminal justice and family support settings.

The Need for Integrated Monitoring

Drug & alcohol dependency frequently occur together, and effective treatment relies on trust and therapeutic engagement. Objective monitoring strengthens clinical decision-making and allows intervention before relapse becomes entrenched:

- Urine and oral fluid testing reflect only recent use, with a very short detection window
- Breath testing only detects alcohol at the moment of testing
- Missed appointments can delay identification of relapse
- Sample substitution and adulteration remain a concern with spot testing

DrugPatch® - Continuous Drug Monitoring

A tamper-evident wearable patch collects sweat continuously for up to 10 days, giving evidence of abstinence or use across the entire wear period - not just a single point in time. Results are lab-confirmed via LC-MS/MS with full chain of custody, and the patch is comfortable and discreet enough for normal daily activities to continue.

Cocaine Group	Amphetamine Group	Benzodiazepine Group	Opiate Group	Opioid Group	Cannabis Group	Others
Cocaine	Amphetamine	Diazepam	Morphine	Methadone	THC	Ketamine
Benzoylcegonine	Methamphetamine	Nordiazepam	Codeine	Oxycodone		
	MDMA	Oxazepam	Dihydrocodeine	Tramadol		
		Temazepam	6-MAM	Buprenorphine		
		Lorazepam	Thebaine	Norbuprenorphine		
		Alprazolam		EDDP		

(more substances in development phase including Pregabalin, Gabapentin and Fentanyl)

SCRAM Remote Breath® - Alcohol Monitoring

A portable cellular breathalyser enabling scheduled, random and on-demand alcohol testing wherever the client is located. Automated Facial Intelligence (AFI) and GPS confirm the right person completed the test in the right place, with real-time alerts on every result.

Store-and-forward capability retains approximately 40,000 - 48,000 results if connectivity is lost, transmitting automatically once service resumes - so no result is ever missed.

A Complete, Evidence-Based Picture of Abstinence

DRUG PATCHTM

The Simple, Smarter & Superior Choice for Monitoring Drug Abstinence

An Integrated Drug and Alcohol Monitoring Solution for Drug Treatment and Recovery Services

DrugPatch[®] and SCRAM Remote Breath[®]

Integrated Drug and Alcohol Monitoring

Drug Monitoring	Alcohol Monitoring
Continuous monitoring for up to 10 days	Scheduled and random breath testing
Laboratory confirmation (LC-MS/MS)	Immediate alcohol result
Wide range of illicit and prescribed drugs	Facial recognition + GPS verification
Tamper-evident patch, chain of custody	Real-time alerts, offline result storage

Benefits Across the Care Pathway

Clinical

- Earlier relapse detection
- Less reliance on self-report
- Stronger safeguarding assessments
- Supports prescribing decisions

Service Users

- Fewer clinic visits
- Keeps work & family life intact
- Builds accountability & motivation
- Recognises real progress

Provider / Operational

- Fewer urine collections, less admin
- Secure evidence for commissioners
- Rapid response to relapse
- Works across all care settings

Applications & Measurable Outcomes

- Community drug and alcohol teams
- Residential rehabilitation
- Detox units
- Criminal justice & probation
- Family support & court proceedings
- Supported housing
- Recovery aftercare
- Workplace recovery programmes

Provides measurable evidence of sustained abstinence, treatment completion, engagement, relapse prevention, safeguarding and commissioning quality assurance - helping providers demonstrate treatment effectiveness with reliable clinical evidence.

DrugPatch[®] and SCRAM Remote Breath[®] together give recovery services a complete, evidence-based picture of abstinence - supporting earlier intervention, stronger safeguarding and better outcomes.
